## DETAILED ACTION

### *Election/Restrictions*

1. Restriction to one of the following inventions is required under 35 U.S.C. 121:
  - I. Claim 16, drawn to an optical switch, classified in class 385, subclass 18.
  - II. Claim 17, drawn to an optical switch, classified in class 385, subclass 18.
  - III. Claims 11-15 and 19, drawn to a method of testing mirrors in an optical switch.

The inventions are distinct, each from the other because of the following reasons:

2. Inventions I and II are related as subcombinations disclosed as usable together in a single combination. The subcombinations are distinct from each other if they are shown to be separately usable. In the instant case, invention I has separate utility such as an optical switch without a plurality of test outputs. See MPEP § 806.05(d). If group I or II are elected, then claims 1-10 and 18 will be examined with either of the elected groups I or II as combinations of the elected subcombination.

3. Inventions I/II and III are related as product and process of use. The inventions can be shown to be distinct if either or both of the following can be shown: (1) the process for using the product as claimed can be practiced with another materially different product or (2) the product as claimed can be used in a materially different process of using that product (MPEP § 806.05(h)). In the instant case the product as claimed can be used in a materially different process such as switching signals in an optical cross connect.

Art Unit: 2877

4. \* Because these inventions are distinct for the reasons given above and have acquired a separate status in the art because of their recognized divergent subject matter, restriction for examination purposes as indicated is proper.
